Office Action Summary	Application No. 10/675,898	Applicant(s) TUNIEWICZ ET AL	
	Examiner Michael A. Friedhofer	Art Unit 2832	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 112

1. Claims 1-35 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claims 1-35, "completer/breaker" is an improper form of the alternative making the claim indefinite.

In claim 5, line 4 prior to "pair", insert --one--.

In claim 5, line 7 replace "side edge" with --one of the side edges--.

In claim 17, line 1 prior to "insulative" insert --said--.

In claim 17, line 4 prior to "insulative" insert --said--.

DETAILED ACTION

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-3, 16, and 26-29 are rejected under 35 U.S.C. 102(b) as being anticipated by Miller et al (Re. 34,113).

Miller et al discloses in figures 1-3 a multi-terminal electrical safety switch for simultaneously closing or simultaneously opening electrical circuits connected

thereto including a terminal block 11; insulative block 24 replaceably attached to the terminal block; and current path completer/breaker 29. The current path completer/breaker replaceably engages the insulative block and the terminal block. The current path completer/breaker may simultaneously complete or break the current paths through the terminal block when engaged with the terminal block thereby simultaneously closing or opening the electrical circuits connected to the terminal block. The current path completer/breaker breaks the current paths when removed from the terminal block which allows the electrical circuits connected to the terminal block to be safely worked on without any inadvertent closing of any of the circuits by virtue of the physical removal of the completer/breaker. The terminal block, the completer/breaker, and insulative block are generally rectangular-parallelpiped-shaped. The completer/breaker includes handle 36 in which the handle extends upwardly from a top surface of the completer/breaker. The handle is generally T-shaped for facilitating gripping of the completer/breaker.

Allowable Subject Matter

4. Claims 4-15, 17-25, and 30-35 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.
5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Hicks et al, Kuki et al, Matsumoto et al, and Wise et al teach various removably engageable completer/breakers with terminal blocks.
